METROPOLIS ENERGY AND QUINTANA INFRASTRUCTURE & DEVELOPMENT CLOSE ON THE ACQUISITION OF THE RICHLAND AND STRYKER FACILITIES

HOUSTON, TX, October 19, 2011/Internal Newswire/Metropolis Energy/ — Metropolis Energy (“Metropolis” or “Company”), in conjunction with Quintana Infrastructure & Development, closed on the acquisition of two power generation stations from First Energy Generation Corporation. The facilities are the 444 MW Richland power station (Defiance, Ohio) and the 20 MW Stryker power station (Stryker, Ohio). The installations are peaking generation stations and include seven individual peaking units. These units are principally natural gas-fired and are located in the ATSI region of PJM.

The acquisitions of the Richland and Stryker facilities represent the first transactions completed by Metropolis since its launch in February 2011. The Richland and Stryker power stations are strategically positioned in the transmission constrained PJM-ATSI region and are expected to benefit from regional capacity and energy shortfalls as a result of planned retirements of solid fuel fired generation facilities. The acquisition of these two highly reliable facilities is consistent with Metropolis’ objective of acquiring, owning and optimizing efficient and reliable generation plants in key power markets.

About Metropolis Energy

Metropolis is a privately held, power-sector origination and investment firm founded in 2011 and located in Houston, TX. The Company’s Management Team boasts of collective M&A, Development and Asset Optimization transactions/assignments of over 9,000 MW of domestic and international power assets. Metropolis is an environmentally conscious and responsible investor, insisting upon strict environmental stewardship and a good neighbor policy.
